

# RARE AND EXOTIC CARS

BY KYLE

SILVERBERG

When I go to all of these car shows, I don't go because I think it's fun, I do it because I learn from each car show about the old-fashioned cars and the exotic rare cars. Some features for the older cars or old-fashioned cars are more joysticks, pedals, buttons and sometimes things to crank the windows.

Exotic cars have many features like the Bugatti and the Tesla sports cars. In an interview with Dave Hunt, a car collector, he said that some cars have voice control and the Tesla is an electric car so there is no need for gas and it makes no sound when it starts up. According to the classic cars website some cars even steer themselves but those are very hard to find

Exotic cars and old-fashioned cars have many different styles outside of the car. Some styles for the exotic cars are more of a bendy, curvy shiny type like Ferraris and Porches. According to classiccars.com the old cars, which are more dented, are all torn up and they seem to have fewer windows and are made out of wood.

Some cars take over five minutes to start.

Some cars could have over 900 Horsepower.

Some cars can only get you 20 to 25 miles per hour maximum

Some cars go over 400 miles per hour.

Some cars are over millions of dollars

Some cars have 1 foot headlights

Some cars like the Lamborghini are gold plated

As you can see, new cars can be a lot like old cars but then again there are differences. There are many different exciting features and benefits about cars and maybe you can discover them to.
