

A close-up, front-quarter view of a red sports car, likely a Ferrari, parked on a dark asphalt surface. The car's hood, headlights, and front grille are visible. The text is overlaid on the left side of the image.

The Difference Between Sports Cars and Normal Cars

By Leo Kravitz

It was a normal day, until I noticed a hint of bright color at the parking lot and went to where it was. When I got there, I saw the coolest thing ever! It looked like a car, 4 wheels and everything, but I still wondered if it did the same things as a normal car, but that question was answered when I saw it pull away with major speed. I asked my dad what that was, and I figured out, a sports car. After that, I started getting into sports cars more, and comparing them to normal cars. Soon I figured out that normal cars will last you longer, but sports cars are more updated for the things you need.

First of all, one reason that normal cars will last you longer, but sports cars are more updated for the things you need is that updated and newer sports cars are safer than newer normal cars. For example, on *cars.com*, it states, “Sports cars are more updated than normal cars, so almost all sports cars have auto-braking.” Another example is also on *cars.com*, and it says, “There are more airbags in sports cars than normal cars.” One final example is from my grandpa, Alan Kravitz, where he thinks the other side and says, “A normal car is thicker and is layered with metal more which will protect people in the inside of the car.” This means that sports cars would be the safer choice for cars.

Second of all, another reason that normal cars will last you longer, but sports cars are more updated for the things you need is that sports cars move faster and have more powerful engines than normal cars. For example, on *htpoint.com*, it says, “Sports cars engines can go up to 60 mph in seconds.” Another example is from a website called *autos.com*, and it says, “Sports cars will get you places quicker.” One final example is from a website called *cars.com*, and it says, “Sports cars have a more powerful engine than normal cars.” This means that if you want a faster car, choose a sports car.

Last but not least, the final reason that normal cars will last you longer, but sports cars are more updated for the things you need is that one thing normal cars are better at is doing long distance trips. For example, a quote from my dad, David Kravitz and he states, “Normal cars have more trunk space and seating space for long distance trips.” Another example is a quote from my grandpa where he says, “Normal cars will survive in severe weather.” One final example shows the other side from a website called *cars.com*, and it states, “Sports cars have better tires for the winter.” This means that if you go on road trips or long distance trips a lot, choose a normal car for that.

A Porsche on the streets of NYC.

Even normal cars are designed to look like sports cars.

A normal car in NYC.

People also drive convertibles a lot.

Overall, people always say that sports cars are just for show, but normal cars may be good for some minor things, but sports cars are more updated and are better for major things.
