

TIME FLY'S IN EVOLUTION

Devin Mindreau

**EVOLUTION CHANGES EVERYTHING SO MUCH THAT
YOU CAN'T TELL A DINOSAUR LIKE THE TREX TO HIS
COUSIN'S BIRDS**

**DINOSAURS HAVE SO
MANY COUSIN'S!!!!**

 **dinosaurs**

 **birds**

 **reptiles**

EVOLUTION CHANGES...

But some reptiles only changed a little bit like this is a aligator before...

ALL ANIMALS.

And this is a aligator after it evolved.

A little in side information on dinosaurs and evolution

The evolution of dinosaurs is a mysterious thing. Humans weren't able to witness the extinction of dinosaurs because humans didn't exist billions of years ago. Even with our Technology we are still only able to make hypothesis or theory's based on bones.

Darwin's theory started with small dinosaurs than evolved into large dinosaurs

Dinosaur's instincts evolved with their bodies like searching for prey, killing prey, and inelegance for killing prey and searching for mates.

A LITTLE IN SIDE INFORMATION ON DINOSAURS AND EVOLUTION

- All birds are a living dinosaur, that's right birds, I know it's hard to compare a bird like a chicken to a Terex, but its true.
-
- 65½ million years ago a meteor the size of Manhattan destroyed 75% of life on earth, but 25% of life survived, including small mammals, fish, and birds. The explosion from the meteor was so devastating that they named it k-2 extinction.
-
- So didn't I tell you evolution was AMAZING, I can't wait to see what evolves next!!
