

Flowers Make People
Happy
By: Oriana Gioia

A flower, it has polka dots, lines, or maybe even miniature flowers in it! Even if flowers are different, all flowers causes beauty and sweet smells.

Not all flowers are
SOO beautiful, but it
doesn't mean they
aren't flowers...

Some flowers have
soo much detail, they
look like...*faces!!!* This
flower looks sort of,
like a face.
Doesn't it???

There is a cycle of
birth of every
flower. This shows
all of them.

While new flowers
are growing some are
dying.

These are Irises
(purple flowers).
They smell very nice,
and they look
beautiful, too.

*These flowers evoke
the emotion of
beauty in me.*

Since the beginning of time, flowers have made people happy, or have lifted their moods.

According to ndsu.edu, flowers make people see the beauty in the world. Cassi Jo Schriefer (from ndsu.edu) Says, "...immediate impact on happiness...less depressed, anxious, and agitated... more romantic feelings... happy feelings. Pink is also a good color for showing love and appreciation, if you need a natural mood elevator...flowers will do the trick."

In an interview I had with my dad, he said, "I love them, I like pictures of flowers more than the actual flowers themselves. I love the idea of what represent, warm days, sunny, happy days. Bees being out."

My mom recently posted 3 photos of roses on Facebook, and one of her friends commented, "Flowers= medicine for the soul, eyes, nose and ears (bee-buzzing)."

Flowers are almost everywhere, on paintings, headbands, clothes, streets, bracelets, jewelry, hairclips, they are used as decorations, accessories, and adornments, too.

On the website, natureofdesign.com, it says, "... just the presence of a beautiful floral arrangement can brighten your mood, relieve tension, and even change the course of your day."

In conclusion, I feel/think the that everybody needs flowers to help us live a better/healthier life.
