

HEARING LOSS

BY KARIN UEDA

Importance of Hearing

Imagine you were annoyed with the loud sound that was coming in, slowly into the inner ear. Louder than you could imagine. So loud you could explode. Would you be annoyed from the loud sound you hear? I think you would. I would too. So stay away from the loud sound!

HOW IMPORTANT IS HEARING?

Hearing is very important because we talk to each other and learn from each other. The inner ear is most important.

Hearing is one of the most important things on earth. It's important for people to hear announcements because announcements can involve important information you might need to know. It is important to hear emergency sounds such as ambulances, fire alarms, and police cars so that you can be safe. You will see how important it is to hear.

BLOCK OUT THOSE SOUNDS!

Kids listen to loud noises and conversations. Loud noises make it hard for kids to learn. Kids will get bad grades just because they can not learn and follow directions. Kids have to know that they can lose their hearing easily because their body is not fully developed.

Kids are listening to music that is too loud! A sound you hear goes into the inner ear. The inner ear tells you "It's too loud!" if the sound you hear is really too loud. Kids have to beware of sounds such as ambulances, rock concerts, and screams. Also a lot of kids stay up late and watch TV with loud volume.

Kids can get surgery, extra tests and others when they have to check their ears.

This is a girl who has hearing loss.

THIS IS A GIRL WHO IS LISTENING TO MUSIC. LOUD MUSIC CAUSES HEARING LOSS. LISTENING TO SOFT MUSIC IS THE BEST.

HERE IS A DOCTOR THAT IS CHECKING A GIRL'S EAR DURING A CHECK UP.
