

Doors Galore!

and more!

By: Benjamin Gerchick

# Part 1: Doors-Apartment Doors

- ✦ An apartment door, (the entrance door) usually is a metal door, with a doorbell and a letter and a number to mark where someone lives.

This is an example of an apartment door. It is made of metal and has a doorbell. The letter and number signify the floor number and a letter to help people know where they are, to help guests, or to help deliver packages or a box, with lox?

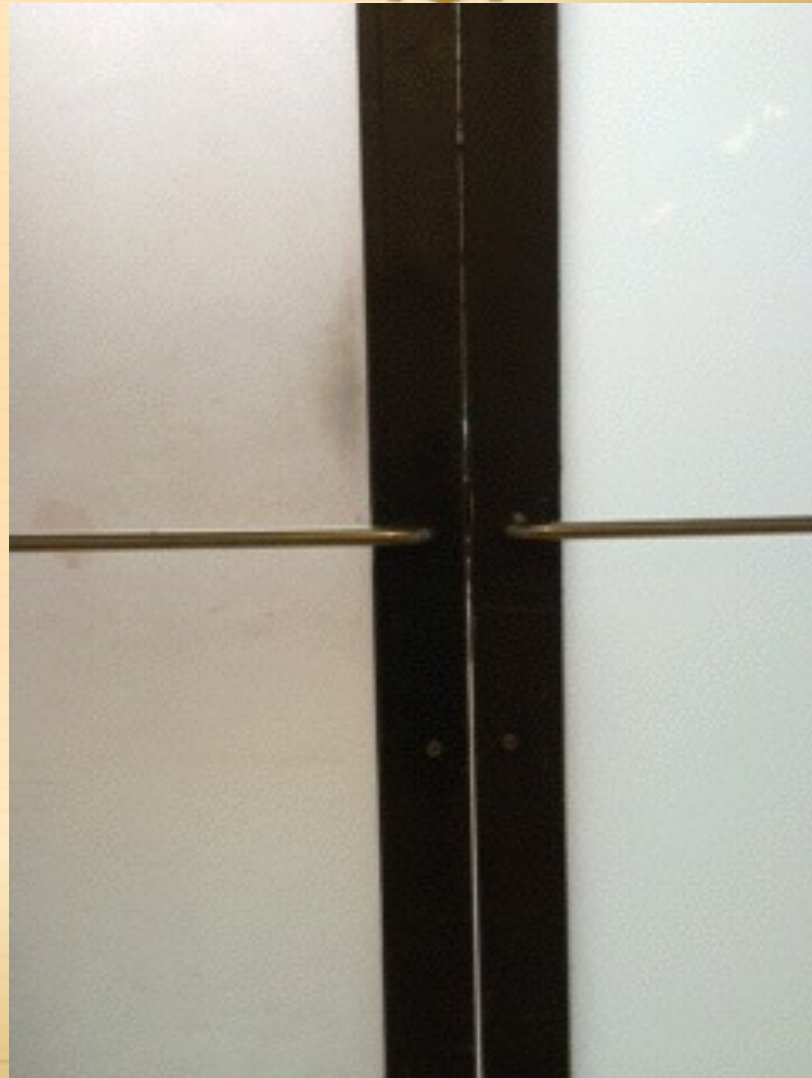

# Revolving Doors

- ✦ In some apartment buildings, you will see a revolving door. A revolving door is a door that turns while you push it. This can be useful if the other doors in an apartment building are heavy. They are usually in fourths, so many people can fit. Sad thing you can't sit.

# Automatic Doors

✦ Automatic doors are doors that open up for you, or unlock for you. It has a sensor, so when you step near it, or press a button, it will either open up or unlock. This door has a vertical bar, moves faster than a car.

# Household Doors

Household doors can be closets, bathroom, kitchen(sometimes), or bedroom doors. They can hold appliances and have many uses. This one has a nice wood design. It's body oh so fine

# Other Doors

- ✦ In this photo, if you look closely enough you can see a wooden door with a window. Though the window pattern adds extra beauty to the door, it makes it much more breakable. Or shakable?

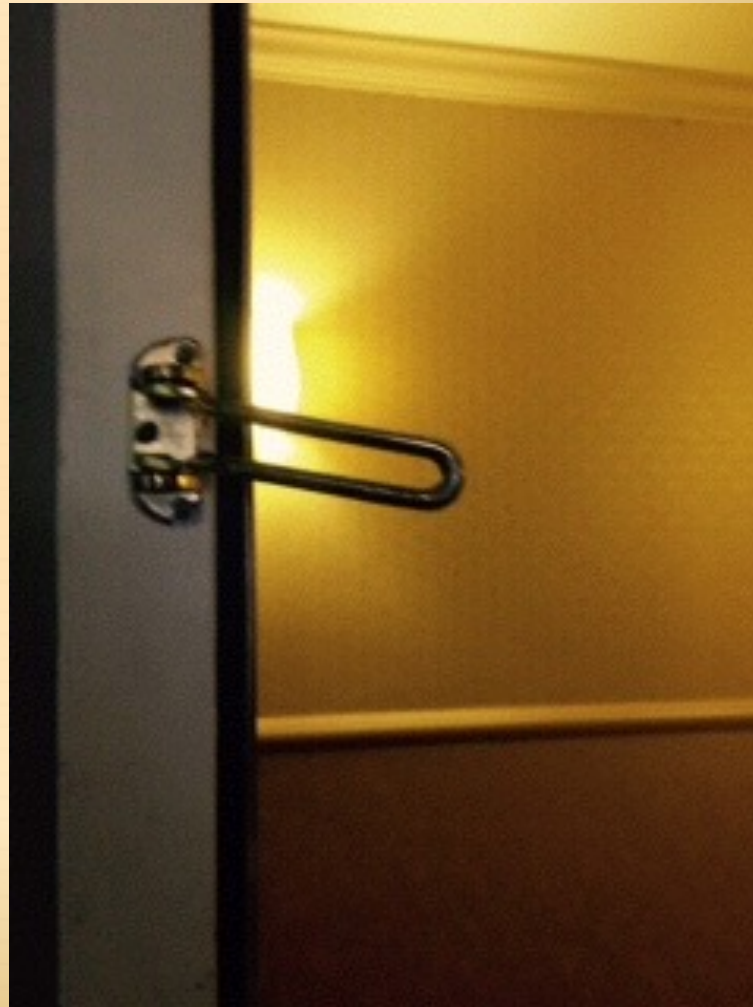

# Part 2: Lock Designs

- ✦ This is an average lock. It has a certain jagged pattern inside it. If your key has that same pattern, and you turn it left the door will unlock. Tough as a rock.

# Long Locks

- ✦ Long locks have almost the same use as average locks. Instead it is locked from the inside, and only the people on the inside can open it. The thing is, it's more fragile, but also much more protective. Though a strong hit might break it. Don't have a fit...

# Doors

- ✦ People might open their door every day, but never happen to notice the designs. People all over the world don't have the designs on their mind. But if you are a photo essayist, you might have it on your mind. Door designs can inspire people like architects to build grand things. But they never notice it! Doors have many uses, they can help people with their job, they can protect you, and they're a part of your everyday life. I'm sure buildings could reach their maximum potential if some architects(not all, because some designs do inspire architects) looked at the designs. See, there's a lot more to doors than you think!
