

MIDDLE OF MANHATTAN

CENTRAL PARK

BY LUCY ZWAKA

Then was then
and done...

....and now is now
and changed

A little seed for me to sow, a little earth to make it grow, A little hole, a little pat, A little sun, a little shower, a little while, and then, a flower.

Architecture is the way some thing is built or designed specifically. Architecture is the complex or carefully designed structure of something such as buildings stair wells, columns, and even on the ground.

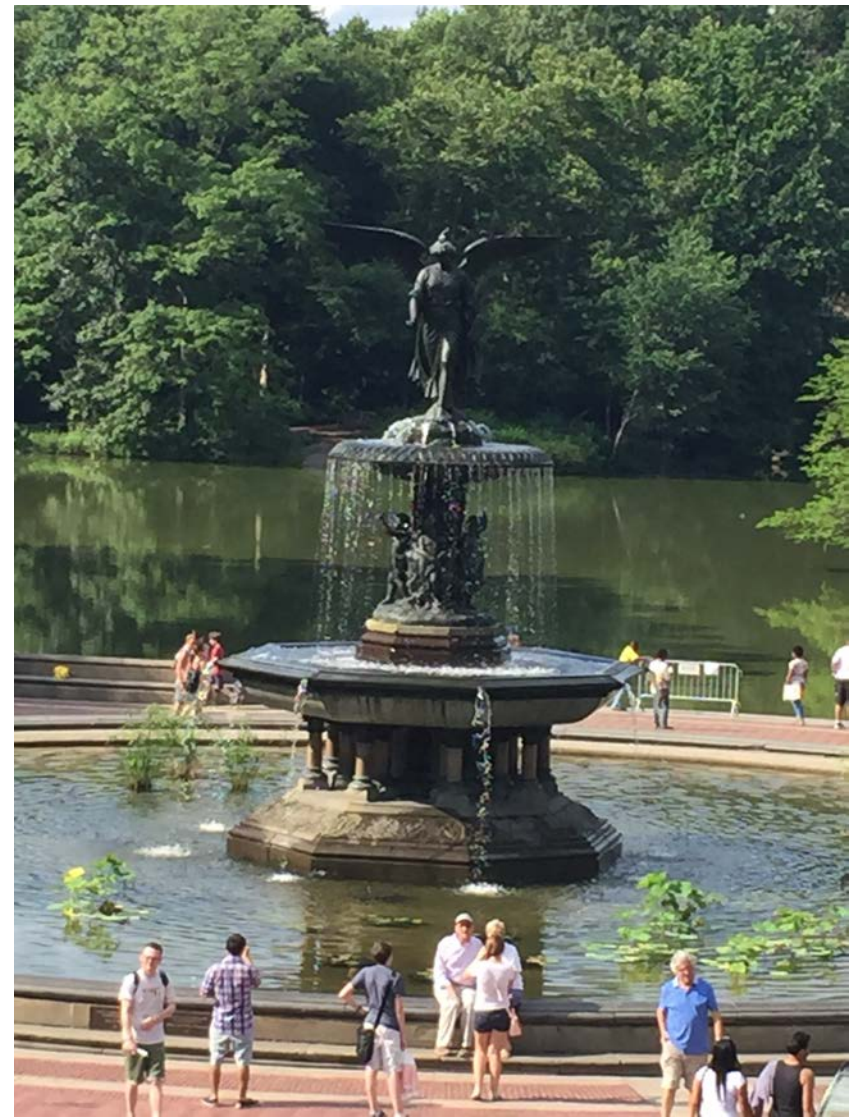

Animals, fake or to take
To take home
Or to roam
To flying up, being hotter
Or lying in the water

The top picture is showing a fountain at the entrance of Central Park, on the bottom is a pond for remote control boats and ducks for people to enjoy watching.

On the bottom right and top right is a statue surrounded by water. On the top of the statue is an angel, there are kids in the middle, and on the bottom is one kid surrounded by columns, looking like he's being trapped.

These are some trees around central park. The ones on the top left are closer to the West Side where you can see the buildings. Most of Central Park is filled with trees. Trees give us oxygen and this is why we have parks with plants and trees that need to be protected.

All these people
Making money
Every one watching
On the sunny day
Having fun
From entertainment to musicians to artists.

CENTRAL PARK FACTS

- On July 21, 1853, the New York State Legislature enacted into law the setting aside of more than 750 acres of land central to Manhattan Island to create America's first major landscaped public park; they would soon refer to it as "the Central Park."
- Central Park takes up approximately 843 acres of land, which is roughly 16 billion New York apartments.
- Central Park is larger than Monaco.
- Since 1908, Central Park has appeared in over 240 featured films, thereby making it the most filmed public park in the world!
- 1975 was the last year of the New York City Marathon was raced entirely inside Central Park.

Central Park, is one of the most visited parks in New York City. Central Park is very popular. Many tourists visit and take pictures. Although it's so special that not only tourists take pictures of the park. There are many places in Central Park there is a lake filled with remote controlled boats and a few ducks. There are playgrounds. Beautiful lawns. And even a zoo! The park is over 100 years old. I love this park and it seems others do too because many weddings or party's are taking place here. I am guessing it is so loved because of all the detailed architecture on stairwells, ridges and columns, and even benches where you sit on – not even noticing. Nature is everywhere around in fountains, on hills and around statues. There are animals everywhere, in the zoos and in the pond. There is a castle and people trying to make money in the busiest of places in Central Park like “street vendors” and musicians, snack carts, and a horse carriage. There are huge rocks and beautiful flowers all around. Central Park is very big and I could not take photos of everything because of the humongous size of the park. Central Park has some of the best qualities a park can have: beauty, wild life, and of course nature and people. Central Park has its name because it is exactly in the middle of Manhattan with more than enough space on both sides for people to enjoy the weather. It separates the West side of Manhattan from the East. It is relaxing to sun in summer, to go on slides in the fall, to go ice skating in winter or take pictures and walking around in spring. Central Park has many attractions. Even if the weather it is too cold or too hot, you can still do more things than in a regular park. It was initially opened in 1857, on 778 acres of city-owned land, later expanding to its current size of 843 acres. In 1858, soon-to-be famed national landscapers and architects, Frederick Law Olmsted and Calvert Vaux, won a design competition to improve and expand the park with a plan they titled the “Greensward Plan”.
