

## ***Cars and their parts***

*This is a picture of a car from the 1900's*

*This is a picture of a car that is so small that it can only fit 1 or 2 people, just like a modern car.*

### **Back round info.**

**Cars and car parts are nothing new. Car parts have been with a car for a 100 years. This Photo essay is about the history of car parts. Most of you probably don't know much about car parts so let me explain. The main place where car parts are under the hood. In my opinion the parts under the hood is probably the most parts that have changed in car part history. Also, recently in 2010 they just added a new car part. It can make cars drive by themselves! That's pretty cool. Ever thought of driving a car with a lever? If you lived in the 1900's you would have to drive with a lever not a steering wheel. Ever seen a car with 3 wheels? 1 wheel in the front, 2 wheels in the back. This car didn't last very long and then we had 4 wheeled cars, 2 wheels in the front, 2 wheels in the back.**

*This is a picture of a 3 wheeled car compared to 1 wheel of 4 on a car.*

Every seen a car with 3 wheels? Well that's what we had in the 1900's although it did not last very long.

**This part has changed the most, its under the hood.**

***This is a picture of under the hood  
of a car***

*This a picture of a lever that people drove as a steering wheel, compared to our modern steering wheel.*

**Ever thought of driving with a lever? That's what you had to do in the 1900's!**

*This is a photo of the place where you fill up on gas. Its called a filling tank.*

**Mostly everything has changed in a car.**

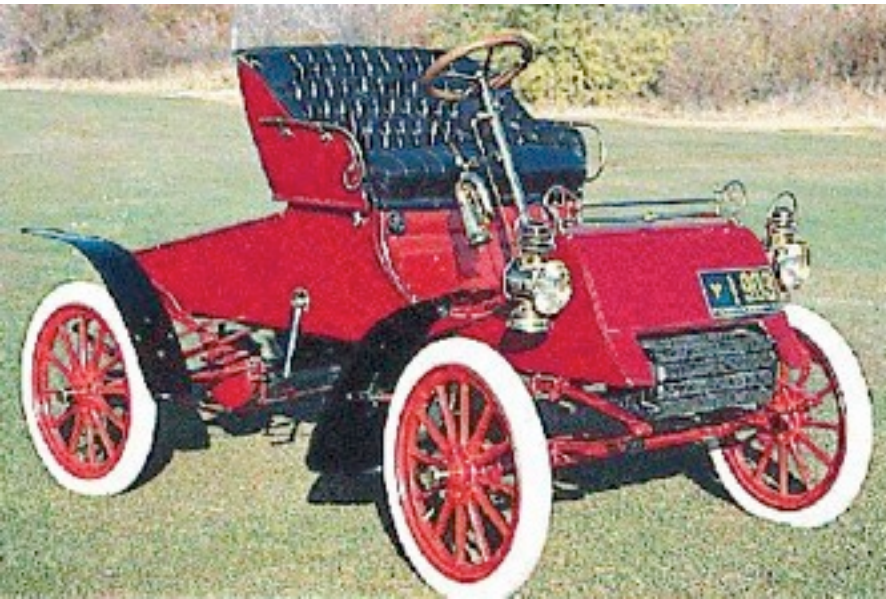

**This is the back of a toyota**

When my family was visiting my Uncle, I was excited. My Uncle was cool. When my uncle went to the store to buy something he invited me to come with him in his car. When he was buying stuff and left me in the car alone, the car moved! When my Uncle came back he said,

“Did you see the cool the cool thing?” he asked

“What cool thing?” I replied

“This” he clicked a button and the car moved again!!! It drove all the way back to my Uncles house. I told my parents the car moved and my dad winked at my Uncle.

*This is a picture of a car that was driven in the 1900's compared to a modern car we drive.*

**But all cars are connected somehow They have been driving for us and we've been taking care of them. Cars are like people.**

There have been plenty of accidents' with the cars recently and in history. I think people should take care of their car and pay attention to it more often. Cars are just like babies, they're precious and very delicate. I know your baby is very important to you and your car isn't as important but at least treat it well then the irresponsible driver. Cars have done a lot in the years it has come out. It has brought people to places quicker then just walking all the way. They're ways to make sure your car doesn't end up like the car below. Try getting a smart car. What I mean is try and get a car that stops before the accident and cars that can drive by themselves. Some people are irresponsible with their car, you know who you are and who your not. Another way to avoid an accident is to get a car with airbags, because just in case your car gets into an accident doesn't mean you have to be dead or injured. Cars have upgraded to be the best they can be. Another part is if their happens to be a scratch on the windshield take notice quickly because a small crack can turn into a bigger crack. Cars have been the biggest help in centuries. It's also important to have fuel in your car, and extra is because if you're on a busy highway lets say then you run out of gas. What you going to do? If you're on a highway, it's going to be hard to get your car out of that because it's so busy. If you try and move your car you or your car might get hit by an ongoing car/truck. That means, going to your trunk get that gas you have then put it in the gas tank and you'll be fine. Think of a car as your baby and you will not have an accident for awhile. Cars are just like people.
